

Curriculum

Bible: Learning About God (Positive Action For Christ)

Kindergarten students read through the Bible and learn about main characters and Biblical concepts in the old and new testaments. We discuss character traits, and how they apply to our lives now. Students are taught to love and respect others, and to practice the "Golden Rule". A Bible verse is given each week for memorization.

Language Arts/Reading (ABeka)

Kindergarten students get a strong foundation in reading using various methods, with much emphasis given to phonics. Students begin with letters and sounds and progress to special chart sounds. They learn to read and spell one and two vowel words, as well as words with special sounds and sight words. Students are instructed in small groups and read in phonics based readers. In the spring, students are encouraged to participate in the Accelerated Reader program. This program allows students to read literature books from the library and take comprehension tests on the computer.

Handwriting (Zaner Bloser)

Kindergarten students are introduced to formal handwriting using the Zaner Bloser method. As letters are introduced, students are shown the correct strokes. Individual attention and practice time is given to ensure success.

Writing (The Writing Spot)

Kindergarten students are introduced to writing through literature. They learn what an author is and enjoy learning about many author styles. Students write in a journal every day and are encouraged to share their writing. They progress at their own rate, beginning with pictures and words, to eventually writing sentences and stories, using correct punctuation.

Math (SRA Real Math)

Kindergarten students are taught math concepts using "hands on" activities and games, as well as practice worksheets and math journals. Students are taught to use manipulatives to solve concrete problems, and are given opportunities to use mental math and problem solving techniques. Many topics are covered such as time, money, addition, subtraction, measurement and more.

Science and Social Studies (Teacher Created Units)

Kindergarten students learn Science and Social Studies concepts through various teacher created units. These concepts are integrated throughout the curriculum using songs, literature, art projects, cooking projects, field trips, experiments and technology such as Education City and Brainpop Jr. Units include **All About Me, Manners, Five Senses, Family, Seasons, Holidays, Weather, Our Country, Careers, Plants, Insects** and more.

Why Choose Us?

The proven excellence of our Kindergarten program gives your child a head start for success. Our caring and fun teachers carry out a plan to help your child reach his/her individual potential. Each teacher is accompanied by a qualified teaching assistant during the prime morning learning hours. This teaching team assures that your child gets the attention that is needed for success.

Our teachers have the flexibility to accommodate different learning styles and levels. They strive to help each child succeed and set goals that the child can reach. Positive reinforcement along with various rewards encourage each child to reach their full potential.

All the while, your child is having fun and learning valuable tools that will assist them as they progress through school. As a team, we also invite parents to volunteer and join in the fun of learning in KINDERGARTEN at SPCS.

Making learning fun with:

Games

Hands On Activities

Smart Boards

Rewards

Weekly sessions in:

Art
