

Summer Math and Science Camp

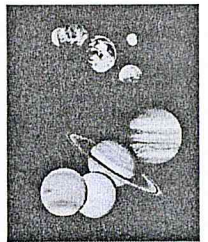

Minimize the learning loss that students experience over the long summer break by enrolling your child in summer math camp.

Summer math camp will offer fun and rewarding activities that will build the skills and habits that your child needs for a successful school year.

We will explore and experience math by using games, hand-on activities, group projects and technology to further establish math skills and concepts.

We will learn basic scientific principles by experimenting with Mexican jumping beans, cooking in the Chemical Change Cafe, exploring our solar system, and performing many cool experiments.
